

INNER SKIN
ACTIVATORS
CELLULITIS

NICOMENT

INCI

Menthyl Nicotinate, Menthol.

ACTIVITY

Nicoment exerts an indirect purifying action, as it contributes to eliminate the possible present and developing toxins, through the increase of blood microcirculation in the cellulitis panels that suffers of an excessive stasis of interstitial liquids.

GLYCOXANTINE

INCI

Glycerin, Aqua, Hydrolyzed Glycosaminoglycans, Caffeine, Theofillin, Theobromin.

ACTIVITY

Due to their lipolytic potential, xanthines are used in cosmetics as an effective help for the treatment of adiposity and cellulitis, playing a stimulation of the mobilization of fatty acids in adipose tissue through a lipolytic process.

GLYCACID ECO

INCI

Glycerin, Aqua, Hydrolyzed Glycosaminoglycans.

ACTIVITY

it helps to improve the intradermic penetration, and it is a substance for the physiological synthesis of medium molecular weight hyaluronic acid. In the cellulitis treatment, the increased permeability of the connective tissues increases the drainage of the interstitial liquids, and a better bioavailability of the active ingredients helps to reduce the inflammatory status and to recover the microcirculation.

GLYCOGEM CENTELLA

INCI

Glycerin, Aqua, Hydrolyzed Glycosaminoglycans, Centella Asiatica meristem cell culture.

ACTIVITY

It shows an antioxidant activity much more effective than the most common known antioxidant and it also develops an important anti-hyaluronidase activity. Furthermore it improves the lymphatic liquids draining. It is used in controlling inflammation, tone and permeability of microcirculation.

CARNOXYN

INCI

Aqua, Carnitine Fumarate, Sodium Pyruvate, Succinic Acid, Citric Acid

ACTIVITY

It carries out on the mitochondrial functionality, due to the activity promotion on carnitine transferase working in synergy with Krebs cycle acids. It increases the consumption of the fatty acids generated by lipolysis

TARCHOPLUS

INCI

Dicaprylyl Ether, Tarchonanthus Camphoratus oil, 4 Terpineol, Helicrysum Angustifolium extract.

ACTIVITY

The activity of the essential oils of TARCHOPLUS is expressed by decreasing the irritation and consequent oedema, characteristic of cellulitis syndrome (PEFS)
